

# Scanox i500 HD

## Rough Analyzer for up to 500 carats

Scanox i500 HD is a revolutionary rough analyzer that can measure large rough diamonds, up to 500 carats. Using this system you can be confident when buying extremely large rough diamonds.

### Product Highlights:

- Can measure rough diamonds up to 500 carats.
- High Resolution Digital Camera for most accurate mapping of the smallest visible inclusions.
- Best Value feature with advanced algorithms for automatic analysis of different cut grades, shapes, clarity grades and inclusions' positions, for maximum profit.
- Optional supplement: laser scanner - enables precise mapping of grooves and holes.
- Compatible with OGI Rough Software.

There are two ways to evaluate the potential of a rough stone,

1

One is the old-fashioned way, which might not indicate all that can be achieved from the stone

2

The other is using Scanox i500, which presents all potentialities for maximum yield from the rough stone

### Technical Information

Dimensions: W120 x L400 x H150 (mm)

Weight: 5.8kg

Voltage: Universal 100V-240V for global electrical compatibility
