

## GEMSCcribe inscription system from SAWCut LTD

SAWCut LTD, a division of the OGISystems Group, a world leader in technological solutions for the diamond industry is set to launch GEMSCcribe, a powerful automatic inscription system that has been developed at the company labs in Israel.

According to Marketing and Sales Department manager, Lior Modlin, GEMSCcribe comprises several unique capacities that make it more beneficial and practical than any other devices of the sort. First, the system can inscribe on diamonds of different sizes, ranging from 5 points to 1000 carats. It also has the ability to inscribe on certain embedded stones. Furthermore, the size of the fonts, numbers and shapes can range

from 20 to 250 microns. The system also supports numerous Windows fonts, including Chinese.

“GEMSCcribe is a convenient and user-friendly system. The program has been designed and planned as Plug n’ Play, thus no special training is required of the client before operating the device. Another important attribute is the fact that the system requires almost no maintenance and is available at an affordable price,” Modlin adds.

The system will be unveiled at the forthcoming Hong Kong Jewellery & Gem Fair which will take place in AsiaWorld Expo 2010 in

September this year. ■
