RAPAPORT... OGI Systems Ltd. the leading company in technological solutions for the diamond industry launched its new USB LASER MARKER, one more product from the Plug 'n' Play USB technology that OGI specializes in.

The new model, has a micro foot print for the laser marking technology and needs no more than 1 foot of table space. Though it is micro in size, it is big in production. The new product comes with the latest rough planning software from OGI Systems Ltd.

This USB LASER MARKER is characterized by the high-speed performance and the maximized calculation capacity never seen before in any of the similar machines existing in the diamond industry.

Its distinctive characteristics stand up with its electronic components that enable the machine to maximize the marking of stones. (A stone in few seconds.) Also the fraction of time to calculate the optimized marking lines is one of its unique characteristics that make this machine efficient and friendly to use. It is easy to carry and can be connected to most laptops available.

OGI Systems Ltd. is the first company to have USB technology based laser marker system with rough planning and laser scanning. OGI Systems Ltd. is also the first company in the diamond industry to introduce the effective mobile planner system with laser scanner facility named OGI Tender. Today, most of the diamond traders in the world are using OGI Tender when going out buying rough or polished.

The existing clients that have in their possession the LASER MARKER system are invited to address OGI Systems Ltd. offices or their local dealer for an upgrade of their machines into the new technology.

The vision of Daniel Benjano – OGI Systems Ltd. CEO – is to move the industry forward by creating and adapting new tech products that aid the diamond industry members in their daily work with the automatic marking device – the OGI Rough Analyzer and later on with the distinctive OGITender.

OGI SYSTEMS LTD. Will launch, in the very near future, its new revolutionary technology based upon his vision. This new technology will produce a new wave of technology for the industry with its automatic marking system.

If you wish to take part of OGI SYSTEMS success, do not hesitate to address our offices around for further support and assistance.
