RAPAPORT... January 24, 2008: OGI Systems Ltd., the market leader in technological solutions for the diamond industry, is pleased to announce the launch of its new USB LASER MARKER, another product from the Plug 'n' Play USB technology that OGI specializes in.

The new model has a micro foot print for the laser marking technology, and occupies less than a one foot table space area. Though it is micro in size, it's BIG in production. The new product comes with the latest rough planning software from OGI Systems.

The USB LASER MARKER is characterized by high-speed performance and maximum calculation capacity never seen before in similar machines in the diamond industry.

Its distinctive characteristics stand up for its electronic components that enable the machine to maximize the marking on the stones (a stone in few seconds.) Also, the fraction of time to calculate the optimized marking lines is one of the unique characteristics that makes this machine efficient and friendly to the user. The marker is ease to carry and can be connected to most laptops.

OGI Systems is the first company to use USB technology-based laser marker system in rough planning and laser scanning. OGI Systems is also the first company in the diamond industry to introduce the effective mobile planner system with laser scanner facility named OGI Tender. Today, most diamond traders in the world use the OGI Tender when going out for rough buying or polish buying.

Existing clients that have the LASER MARKER system in their possession are invited to contact OGI Systems offices or their local dealer to upgrade their machines with the new technology.

The vision of Mr. Daniel Benjano – OGI Systems Ltd. CEO – is for the company to lead the industry toward new horizons by creating and adapting new products that aid the diamond industry members in their daily work, as done in 1999 with the automatic marking device – the OGI Rough Analyzer and later on with the distinctive OGI Tender.

OGI Systems will launch its new revolutionary technology based upon this vision in the very near future.
