**RAPAPORT...** OGI Systems and Zvi Yehuda (Israeli Color machines developer) enabled their customers to transfer color grades of rough diamonds automatically to OGI rough software.

The new Colorimeter model-F, predicts white to yellow (D to K) and (Fancy yellow) rough diamonds at about +½ color grade accuracy reported OGI. The tool is also suitable for brown hues in the color range D-F, give a computerized indication of both the yellow fluorescence (which indicates cloudiness in the stone,) and the blue fluorescence.

This new model detects Fancy yellow in the following groups: None, light fancy yellow, fancy, intense fancy, and vivid fancy.

The system is fully automatic, fully mobile and now also can be connected with USB to OGITender, OGI Marker®, OGI Scanner, and CoMarker®. The color meters can also detect type IIA diamonds, and determine which are suitable for HPHT.
