Court Grants Favorable Patent Conclusion to OGI Systems

May 31, 2011 11:47 AM By OGI Systems

Press Release: In March 2011, the panel of three experts appointed by the Belgian court submitted their final report regarding the lawsuit filed by Sarin Technologies Inc. against OGI Systems Ltd. In line with the report, the panel has announced that the conclusions are favorable to OGI.

The panel of experts confirms its first conclusion and clearly affirms that claims one through 15 of Sarin's patent are null and void for lack of inventive step. The panel states that OGI's "Marker Rough Analyser" and "Multiscope" fall within the scope of Sarin's patent, but given the invalidity of the said patent, they conclude that there is no patent infringement.

Daniel Benjano, the chief executive of OGI Systems, the world's leading company in technological solutions for the diamond industry, has proclaimed that in the near future OGI will launch revolutionary and exclusive technology, which will bring about a dramatic and wide-reaching change and transformation in the diamond industry. The upcoming revolution is predicted to be of a similar scope to that which occurred 12 years ago as a result of OGI's launching of the rough automatic marking system based on 3D planning technology.
